RETOOLING AND RETROFIT

TECHNICAL SERVICE OFFERED BY YOUR
EXPERIENCED PARTNER

RETOOLING AND RETROFIT

The automobile industry is characterized by product life cycles getting shorter and shorter and by continuously increasing demands on quality, performance and price. As sub-supplier you are obliged to flexibly react on these demands. When accepting orders for the production of new parts, therefore you often have to make major investment decisions e.g. concerning your machinery.

As alternative to high investment, for an economic and flexible production, often the retooling or the retrofit of existing machines is considered because due to the lower invest, the cost per part decrease. Moreover, you and your staff are very familiar with quality, performance and operation of the existing machines.

Our retooling specialists design and retool your ALFING machine according to the new requirements within shortest time. Component quality and cycle time are recorded previously so that the current status can be maintained or even improved after retooling. As a result, you get your proven and retooled ALFING machine which produces the new parts in usual high quality and cost-effectively.

BENEFITS FOR YOU

- » Longer life of your ALFING machine
- » Professional retooling by the original manufacturer from one source
- » Low „cost per part“
- » High component quality on proven machine

THE QUOTED SERVICE COMPRISES

- » Design changes e.g. on fixtures and machining stations, based on the new component requirements
- » Complete planning and realization of the machine retooling as well as machine relocations
- » Commissioning and run-in of machining process
- » Competent retooling specialists with centralized contact
- » In case of necessity: control upgrade

FURTHER TECHNICAL SERVICES:

» TRAINING

» MACHINE INSPECTION

» SPARE PARTS

» REPAIR

» SERVICE-HOTLINE

» OPTIMIZATION OF MACHINE PERFORMANCE
